# K⬤RBYT® PRODUCT SHEET

*FEATURING **COURIERS***

WHAT?

Couriers automate the task of importing and tagging content from remote third party drives such as Google Drive, One Drive, and Dropbox.

Save valuable time managing relevant external content by organizing and tagging your media files during the import process.

K⬤RBYT®

Currently supported cloud storage services include Google Drive, Microsoft OneDrive, Dropbox, and Box.

WHY?

Couriers decentralize content publishing by enabling contributors to share content without logging into Korbyt. Large organizations where content will come from a variety of sources benefit from couriers.
